* Create - react - app →

→ It is a boilerplate and by the help of this we can start writing react - apps very easily.

to do that → mandatory.

we do, [npx create- react- app my -app.]

↓
{ it's a package runner tool that comes with npm}

[name of the project folder.]

or we can do,

{ npx create-react-app . }

inside the current folder, only.}

↳ This means all packages will be installed

To run your Project you do →

* npm ~~react~~ start
